Mechanical connectors with shear head screws

NILED propose a complete range of mechanical junction and terminal connectors equipped with shear head screws for LV and MV distribution networks.

The range of junction connectors (MET / MET-S / MET-SR / MDT), can be used with any insulation systems (THERmo-shrinkable solutions, cold slip-on or cold shrinkable solutions, , injected ribboned...)

Holding tool for mechanical connectors

In order to facilitate the installation of MET- MED connectors, and specifically to connect small conductors (cross sections $<$ or equal to 95 mm²), Niled propose the holding tool "CM" :

- allows to maintain on right position the connector
- avoids to bend the conductors
- facilitates the tightening of the screws

CM

1932—2007 : NILED celebrates 75th anniversary

NILED was founded in 1932 by Mr. Marcel Delin, on the idea of an electrical connector as a very suitable solution for the connection systems of that moment. In October 2007, Niled organized the celebration for it's 75 years experience in the field of the accessories for electrical distribution networks.
